

ABSTRACT

A wireless detachable display for a handheld computing device is disclosed. The display system includes a visual display having a communications transceiver, a processing unit having a communications transceiver and sending display data to the transceiver of the visual display, a first power source for the processing unit, and a second power source for the visual display. The visual display is physically separable from the processing unit while displaying information according to communications from the processing unit between the visual display transceiver and the processing unit transceiver.
